Table Top Exercise: Curriculum Assessment and Program Evaluation

Goal: To teach medical residents the basic knowledge and skills in adverse event investigation and analysis.

Learner Assessment Plan

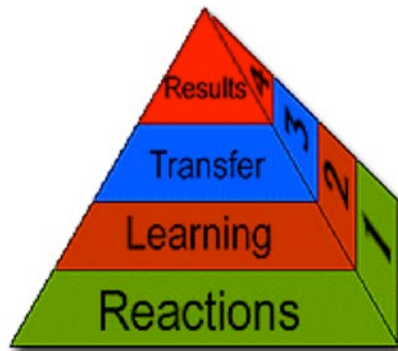

Given your objectives, which level(s) do you plan to target (does, shows how, etc)?

-Test each objective you feel is crucial. More is not always better!

Develop an assessment plan for at least two objectives

-Can you use an existing tool?

Program Evaluation Plan

Which levels (beyond learning) should you assess, considering Dr. Taylor's task? Again, more may not be better.

How will you do this?
